

Using random example

```
package test;
import java.util.*;
public class Name {

    public static void main(String[] args) {
        Scanner obj = new Scanner(System.in);
        String name;
        int num = 4,ans;
        System.out.println("Enter the name:");
        name = obj.next();
        Random r = new Random();
        int score =0;
        for(int i =0;i<5;i++) {
            int num1=num;
            int num2 = r.nextInt(20);
            System.out.println(num1+"*"+num2);
            ans = obj.nextInt();

            if(ans==(num1*num2)) {
                System.out.println("correct");
                score++;
            }
            else {
                System.out.println("Incorrect");
            }

        }
        System.out.print(name+"\t"+score );

        // TODO Auto-generated method stub

    }

}
```

o/p:

Enter the name:

sri

4*6
