

Using Thread example

```
package test.com;

import java.util.Scanner;

public class Thread2 extends Thread{
    public void run() {
        Scanner sc = new Scanner(System.in);
        long num = sc.nextLong();
        int fact =1;
        for(int i=1;i<=num;i++) {
            fact=fact*i;

        }
        System.out.print(fact+" ");

        try {
            sleep(1000);

        }
        catch(Exception e) {
            System.out.print(e);
        }

    }

}

package test.com;

public class Thread3 {

    public static void main(String[] args) {
        Thread1 t1 = new Thread1();
        Thread2 t2 = new Thread2();
        t1.start();
        t2.start();

        // TODO Auto-generated method stub

    }

}
```
